Instructions for forms filling and definitions on household and family

If two or more households reside in one dwelling, for each household should be filled separate questioner P-2, and the data on dwelling should be filled only once, in one of those Form P-2.

A **private household** is considered to be **a family or some other community of people**, who declared themselves to be living together and spending their income collectively for meeting their basic needs (housing, food, etc.), **regardless whether all household members were present at the place where the household was settled**, or if some of them stayed for a certain period of time at some other settlement, respectively country for the purpose of work, education or for other reasons.

A household is also considered to be any person who lives alone ("single-person household"), who has no other household elsewhere. The single - person household could live in a separate or in a shared dwelling, as a single person - subtenant or in a home for single persons or similar, regardless of whether he/she lives in the same room with some other single person or with the members of the landlord's households, but is not spending his/her income together with them.

Collective (institutional) household, is household consisting of persons who live in an institution for permanent care for children or adults, in monasteries - convents and in hospitals for incurable diseases.

The household may be family or non-family. The **family household** may consists of one or more family nucleuses and besides family nucleuses may have person/s who don't belong in the family nucleuses in the household.

Non-family household is a household without family nucleus (households with one member, one - person household, and multi person household, consists of brothers and sister, grandfather and grandson / grandsons / granddaughter / granddaughters; grandmother and grandson / grandsons / granddaughter / granddaughters; and etc., or persons who are not relatives, but are spending their income collectively for meeting their basic needs (housing, food, etc.)

Family nucleus means a family union which consist of only married couple, or parents (both parents or lone parent) and their never-married children. According to the Census methodology, as a family nucleus is also considered a consensual union of male and female partners who live together.

The members of one-family households should be enrolled in the list according to the following order: in the first row should be written the name and surname of reference person of the household, than the names and surnames of the members of his/her family (spouse, children if there are any), then the rest household members (relatives and non-relatives) if there are any.

If the household has more than one family, after the first family should be written the members of the second, third etc. according to the order mentioned before. On the end should be written the names and surnames of the rest household members who are considered as members of the household.

At the end should be written persons who are not members of the household.

If the household has only one person, than this person should be written with ordinal number 01.

If the household has more than 17 persons, the enumerator should take another P-2 form and continue with filing the list with the 19th, 20th etc. member. In this case, in the blank space of the right up corner of the form, the enumerator should mark that this is a continuation of the "List of persons residing on this address" and should write down the same identification and address data as in the first P-2 form where are the first 17 members of the households.
